

# Constellation,

An Exelon Company

## About Constellation

Constellation, an Exelon company, is a leading competitive supplier of power, natural gas and energy products and services for homes and businesses across the United States.

Constellation provides integrated energy solutions that help customers buy, manage and use energy, from electricity and natural gas procurement to distributed energy options and efficiency programs. Constellation's family of retail businesses serves approximately 2 million residential, public sector and business customers, including more than two-thirds of the Fortune 100.

Constellation is a leading energy industry advocate for competition in the U.S. power and natural gas sectors. We believe well-designed competitive markets deliver better results than either traditional monopoly markets or partly restructured markets by providing price transparency, driving investments in generation for reliable electricity supply, and enabling cost-effective development of clean energy sources.

### Helping Customers Manage Total Energy Cost:

Manage your price and lower your quantity within a strategic time frame.

**Constellation's team of experts helps you effectively manage energy supply amidst a volatile market, changing technologies and a dynamic regulatory environment. We understand how to navigate these challenges to deliver the best strategies to fit the needs of your business long term.**

Constellation also has carbon-free electricity solutions for your business to realize the value associated with power generated from Exelon's CO<sub>2</sub> emissions-free nuclear generation fleet. Products like Renewable Energy Certificates (RECs) or Emission-Free Energy Certificates (EFECs) give businesses the opportunity to source their power from environmentally friendly sources when land or capital are unavailable to deploy onsite renewables. Carbon-free electricity purchases may also help your company meet goals for reducing emissions associated with its electricity use.
